

Step by Step Process for creating a Simple Blogging Page

Step 1: Project Setup

1. Install Django:

```
```bash
pip install django
```
```

2. Create Project:

```
```bash
django-admin startproject NeoBlogger
cd NeoBlogger
```
```

3. Create `home` App:

```
```bash
python manage.py startapp home
```
```

Step 2: Configure Settings

1. Add `home` to `INSTALLED\_APPS`:

In `NeoBlogger/settings.py`:

```

```python
INSTALLED_APPS = [
 ...
 'home',
]
```

```

2. Set Templates Directory:

In `NeoBlogger/settings.py`, update `TEMPLATES`:

```

```python
TEMPLATES = [
 {
 'BACKEND': 'django.template.backends.django.DjangoTemplates',
 'DIRS': [BASE_DIR/"templates"], # Add this line
 ...
 },
]
```

```

Step 3: Create Models

1. Define `Blog` Model:

In `home/models.py`:

```

```python
from django.db import models
from django.contrib.auth.models import User

```

```

class Blog(models.Model):
 title = models.CharField(max_length=200)
 content = models.TextField()
 author = models.ForeignKey(User, on_delete=models.CASCADE)
 created_at = models.DateTimeField(auto_now_add=True)
 updated_at = models.DateTimeField(auto_now=True)

 def __str__(self):
 return self.title
...

```

## 2. Run Migrations:

```

```bash
python manage.py makemigrations
python manage.py migrate
...

```

Step 4: Create Forms

1. Define Forms:

```

In `home/forms.py`:

```python
from django import forms

from django.contrib.auth.forms import UserCreationForm,
AuthenticationForm

from django.contrib.auth.models import User

```

```

from home.models import Blog

class SignUpForm(UserCreationForm):
 # Add custom form fields with Bootstrap classes
 ...

class SignInForm(AuthenticationForm):
 ...

class BlogForm(forms.ModelForm):
 ...
'''

(Use the exact form code provided)

```

---

## Step 5: Create Views

### 1. Update Views:

In `home/views.py`, add modified views:

```

```python
from django.shortcuts import render, redirect, get_object_or_404
from django.contrib.auth import login, logout, authenticate
from django.contrib.auth.decorators import login_required
from .models import Blog
from .forms import SignUpForm, SignInForm, BlogForm

# Add modified view functions here

```

...

...

(Use the exact view code provided)

Step 6: Configure URLs

1. App URLs:

Create `home/urls.py` with:

```
``python
```

```
from django.urls import path
```

```
from home import views
```

```
urlpatterns = [
```

```
    path('', views.home, name='home'),
```

```
    path('signup/', views.signup, name='signup'),
```

```
    path('signin/', views.user_login, name='login'),
```

```
    path('profile/', views.profile, name='profile'),
```

```
    path('add_blog/', views.add_blog, name='add_blog'),
```

```
    path('edit_blog/<int:blog_id>', views.edit_blog, name='edit_blog'),
```

```
    path('delete_blog/<int:blog_id>', views.delete_blog, name='delete_blog'),
```

```
    path('logout/', views.user_logout, name='logout'),
```

```
]
```

```
...
```

2. Project URLs:

In `NeoBlogger/urls.py`:

```
``python
from django.contrib import admin
from django.urls import path, include

urlpatterns = [
    path('admin/', admin.site.urls),
    path("", include('home.urls')),
]
``
```

Step 7: Create Templates

1. Create `templates` Folder:

In project root (same level as `manage.py`), create:

...

```
templates/
  form.html
  index.html
  profile.html
...
```

2. Add Template Code:

- Use provided `form.html`, `index.html`, and `profile.html`
- Note: All templates are in the global `templates` folder (not app-specific)

Step 8: Admin Setup

1. Register Model:

In `home/admin.py`:

```
``python
from django.contrib import admin
from home.models import Blog

admin.site.register(Blog)
...

```

2. Create Superuser:

```
``bash
python manage.py createsuperuser
...

```

Step 9: Test the Project

1. Run Server:

```
``bash
python manage.py runserver
...

```

2. Test Features:

- Sign Up → Profile Page
- Add/Edit/Delete Blogs

- Sign Out → Home Page
- Admin Access at `/admin`
